

# PiezoMAT Introduction

Alain GRAILLOT  
**SPECIFIC POLYMERS**

**Research and Development  
Functional Monomers, Polymers and Materials**

EU Project No. 611019

## PRESENTATION OUTLINE

### COMPANY PRESENTATION

- Company Profile - Partners
- R&D Activities

### SP & PIEZOMAT

- NWs Encapsulation
- Polymer/Silver hybrid materials

### OPTO-ELECTRONIC DEVICES

- Functional dielectric materials
- Optical layers
- $e^-$  and  $h^+$  transporting layers

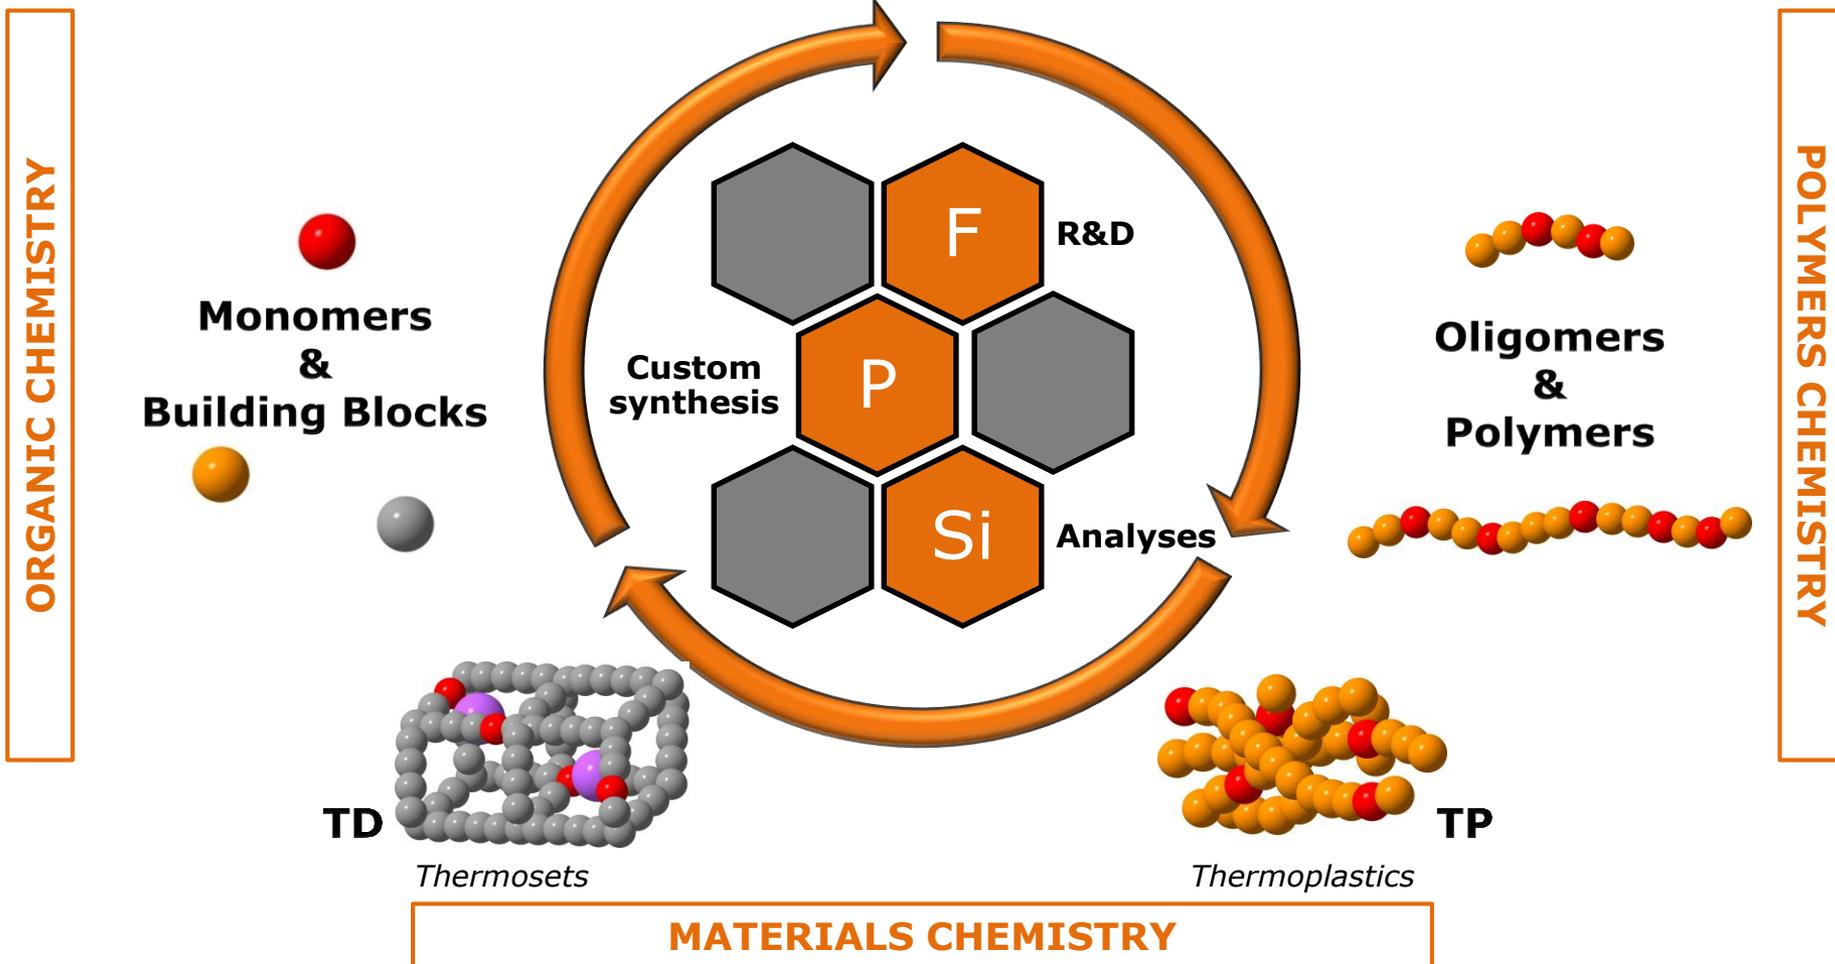

# SPECIFIC POLYMERS – COMPANY PROFILE

- ❑ SME created in 2003
- ❑ Headquarters: CASTRIES (MONTPELLIER - FRANCE)
- ❑ 11 employees : 3 PhDs, 5 Engineers, 2 Technicians, 1 Adm
- ❑ Annual turnover : 2015 – 620 K€ / 2016 – 800 K€
  - ✓ 50 % : R&D services
  - ✓ 30 % : Catalog product sells
  - ✓ 20 % : Custom synthesis
- ❑ 400 customers in more than 30 countries

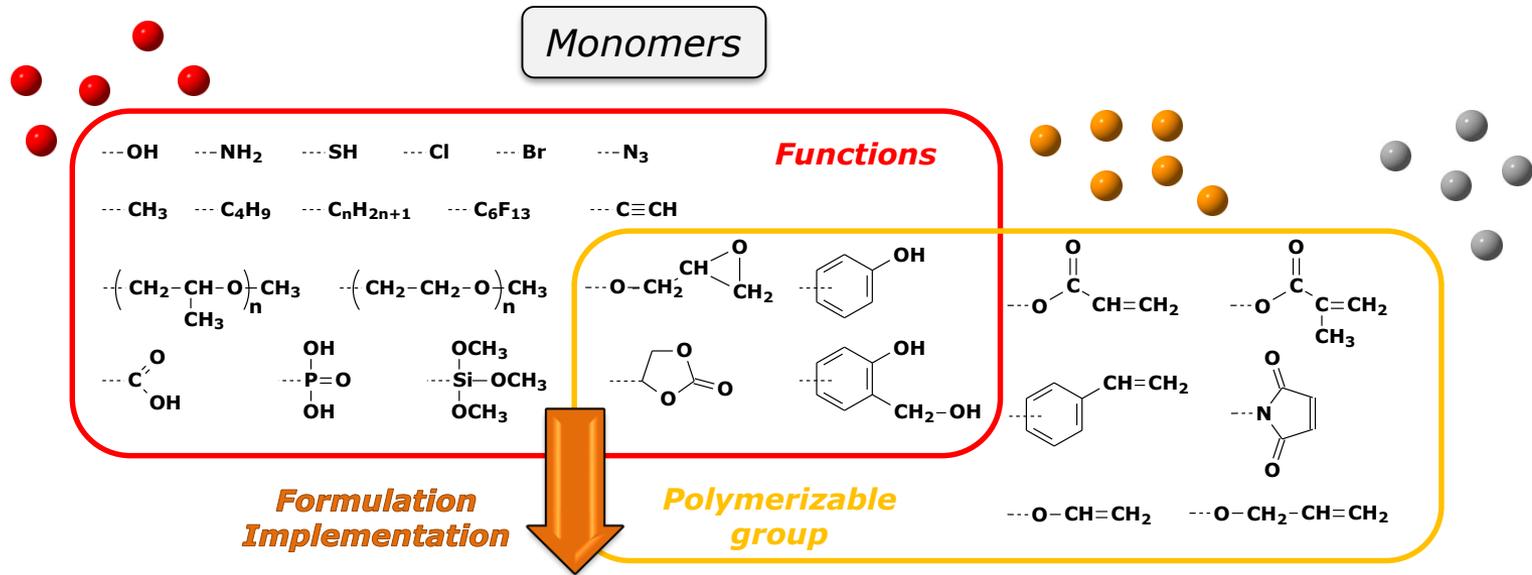

# SPECIFIC POLYMERS – ACTIVITIES

Synthesis of functional monomers, polymers and materials

## SPECIFIC POLYMERS – ACTIVITIES

### Synthesis of functional monomers, polymers and materials

☐ Epoxy

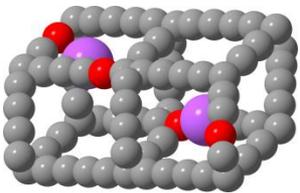

☐ Phenolics

☐ Polyuréthane

☐ Acrylics

☐ Styrenics

☐ Hybrid materials

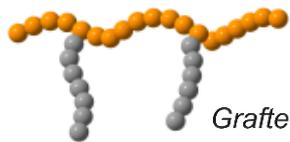

Thermosets

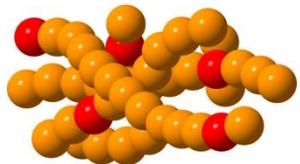

Statistical

Block

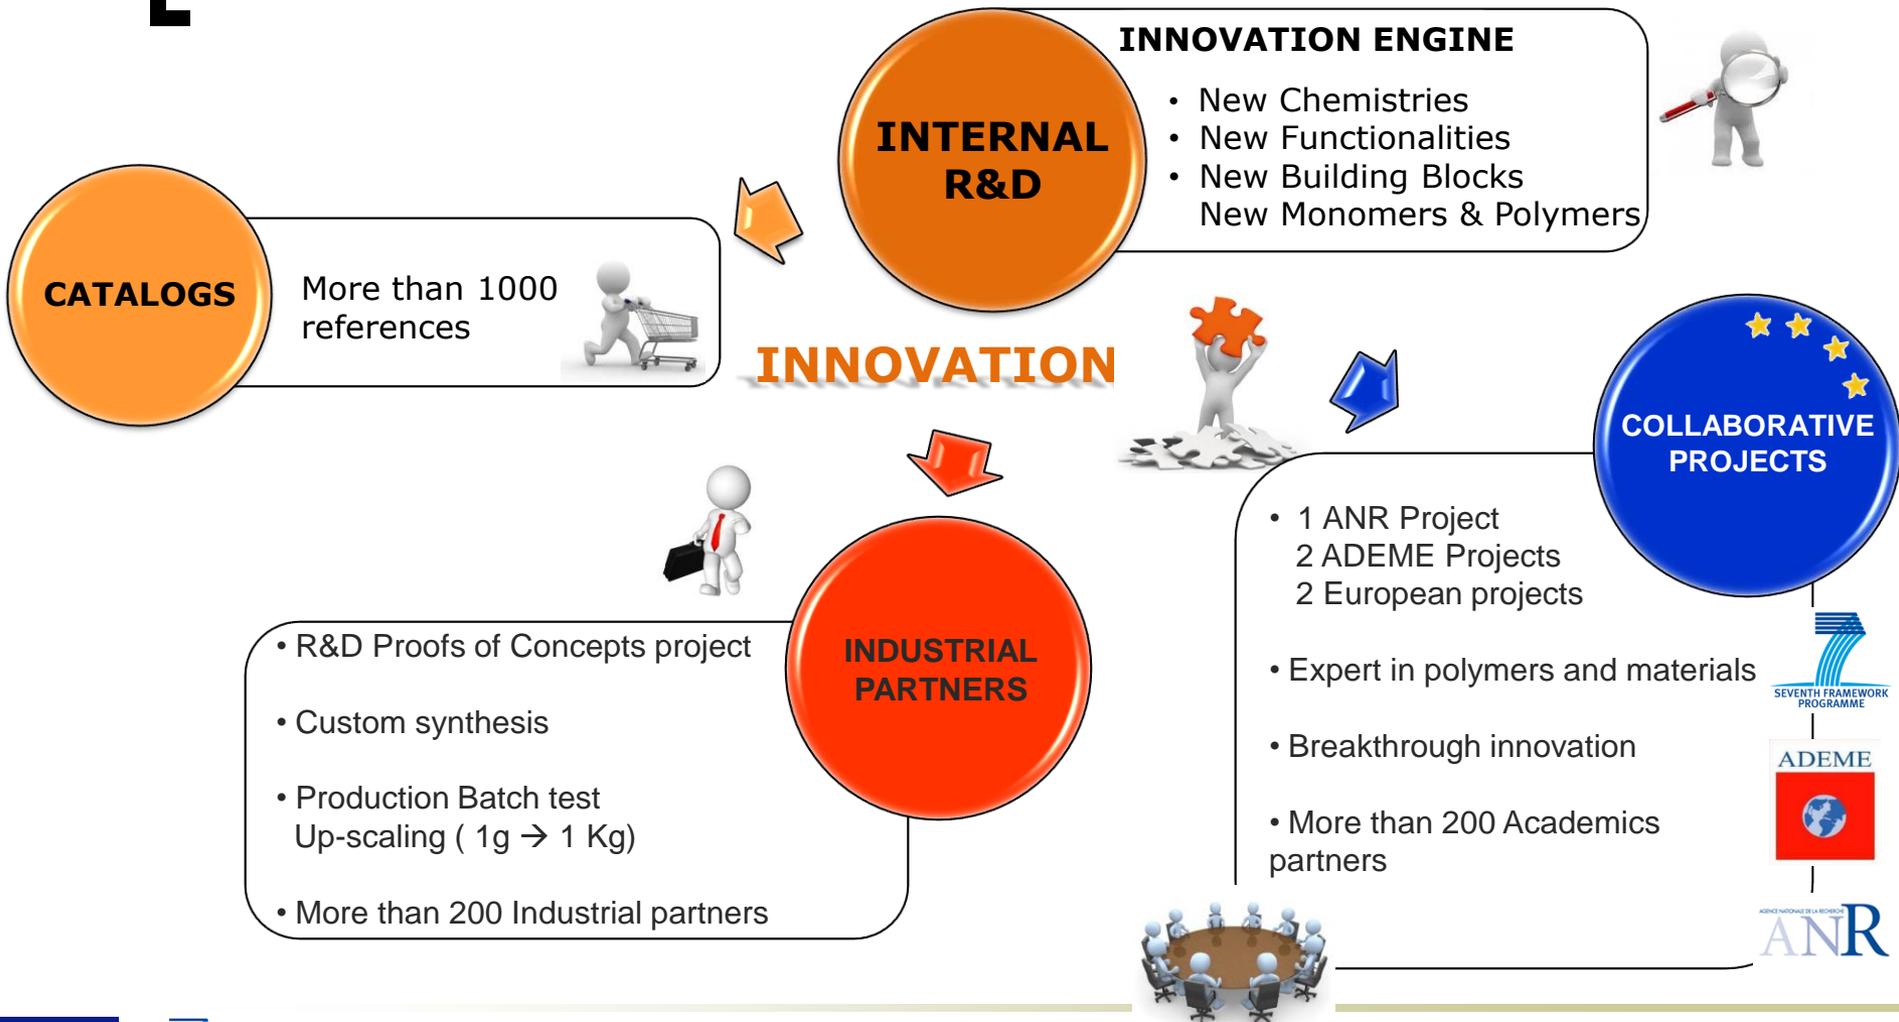

Grafted

Thermoplastics

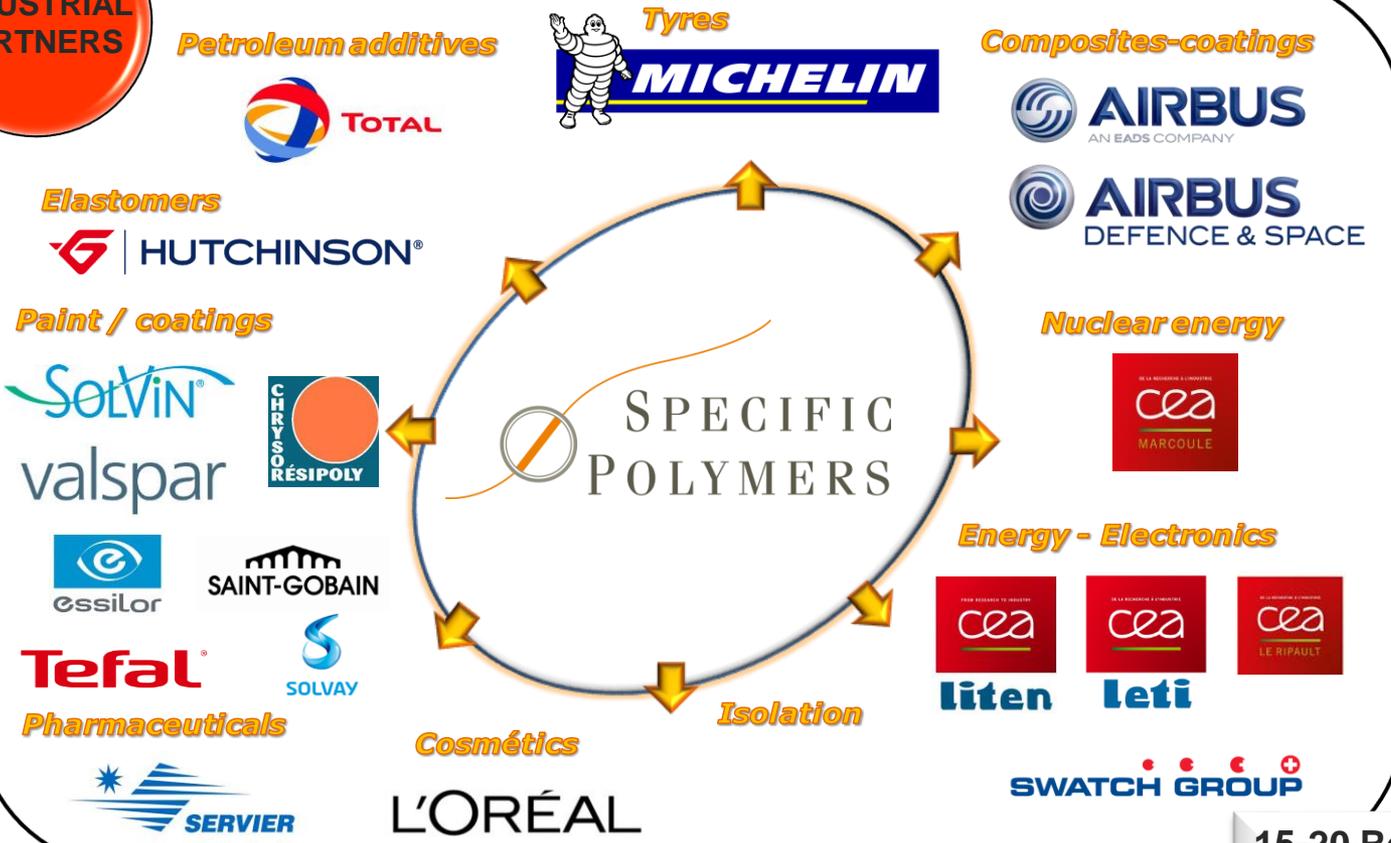

## SPECIFIC POLYMERS – COMPANY PROFILE

## SPECIFIC POLYMERS – PARTNERS

R&D Research Programs & Collaboratives Projects

INDUSTRIAL  
PARTNERS

15-20 Research Program / year

## SPECIFIC POLYMERS – PARTNERS

### Catalog Products and Custom-synthesis – Academic Partners

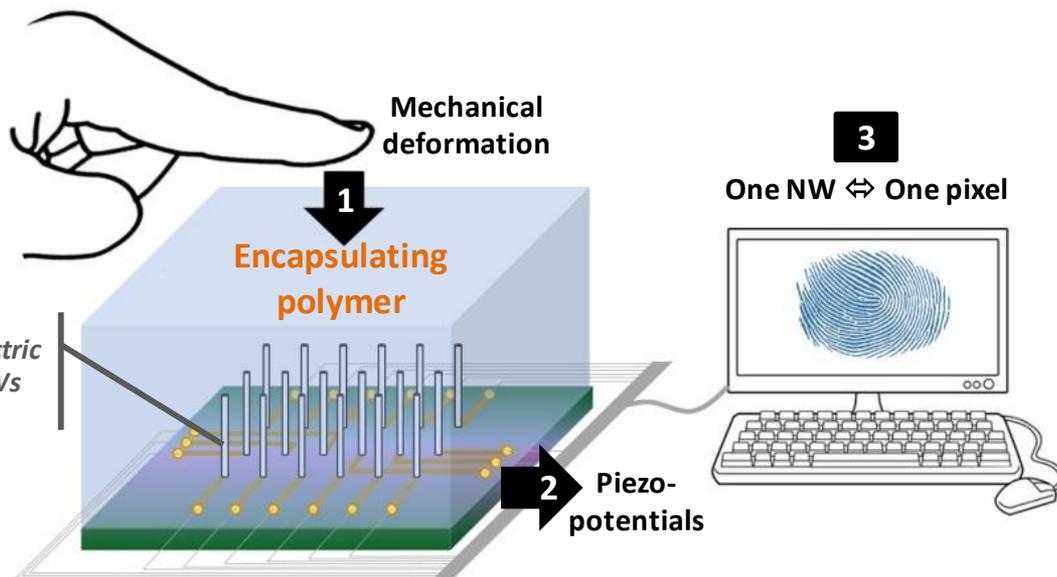

ACADEMIC PARTNERS

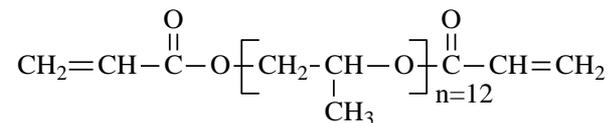

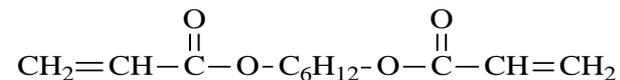

200-250 Catalog Products / year  
30-50 Custom Synthesis / year

## SPECIFIC POLYMERS & PIEZOMAT

Encapsulation polymeric materials in multi-NWs pressure based fingerprint sensors

### Acrylate based UV crosslinked materials

Spin-coating

UV curing

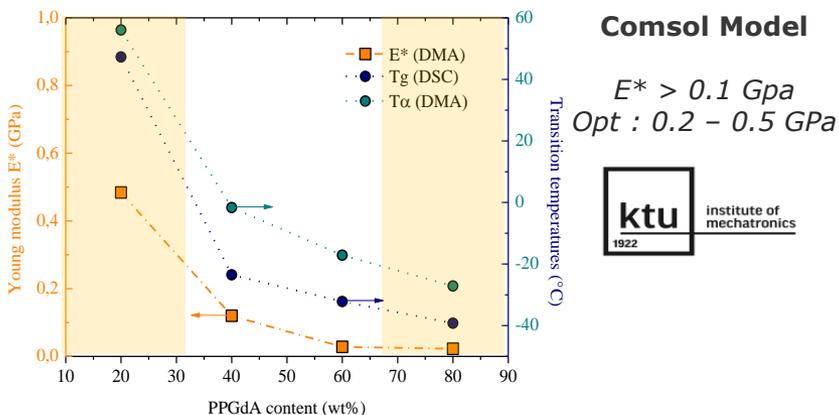

### Required properties

- Adjustable mechanical properties: soft to tough materials
- Accurately and easily processable: liquid formulation
- Compatibility with NWs and seed layers : liquid and solvent free
- Chemical and Thermal resistant : Crosslinked thermoset materials

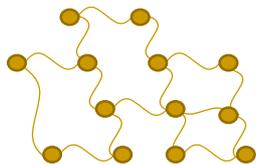

## SPECIFIC POLYMERS & PIEZOMAT

Encapsulation polymeric materials in multi-NWs pressure based fingerprint sensors

### Mastering mechanical properties

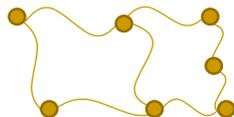

#### Low PPGA content

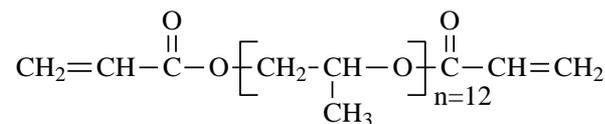

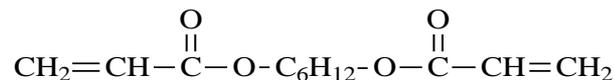

High crosslinking degree  
 ↓  
 High Young Modulus ( $E^*$ )

#### High PPGA content

Low crosslinking degree  
 ↓  
 Low Young Modulus ( $E^*$ )

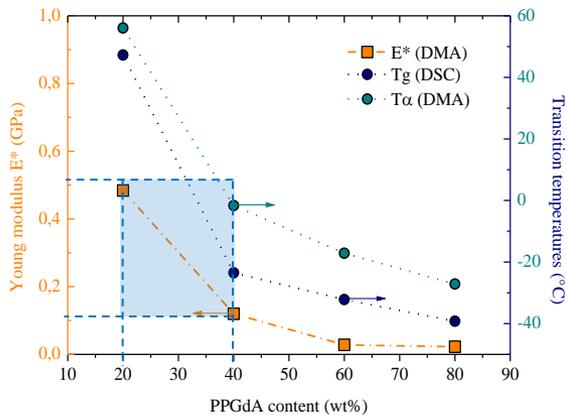

### Acrylate based UV crosslinked materials

## SPECIFIC POLYMERS & PIEZOMAT

Encapsulation polymeric materials in multi-NWs pressure based fingerprint sensors

### Mastering mechanical properties

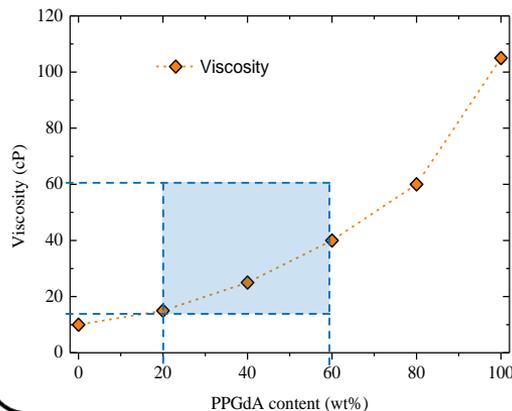

#### Comsol Model

$E^* > 0.1 \text{ GPa}$   
Opt : 0.2 - 0.5 GPa

PPGA content  
20-40 wt%

Formulation  
Viscosity  
 $\updownarrow$   
Processability

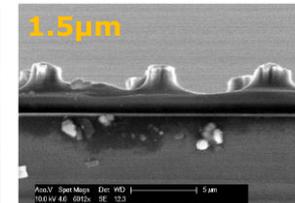

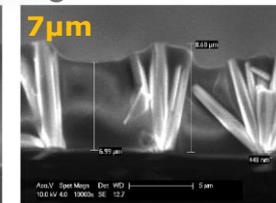

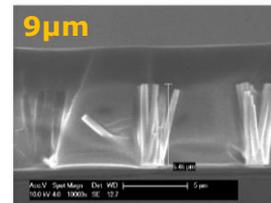

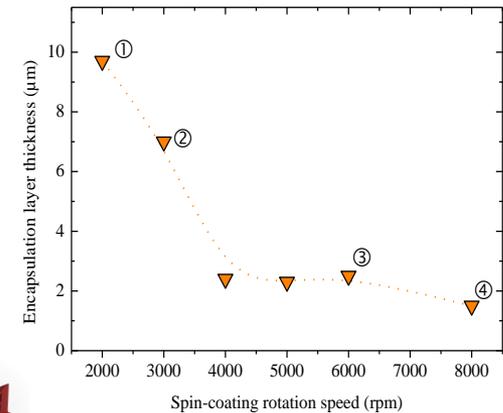

Best Compromise  
40 wt% PPGdA

### Mastering thin layer thicknesses

Formulation : 60%wt HdA / 40%wt PPGdA

Influence of  
spin-coating  
rotation speed

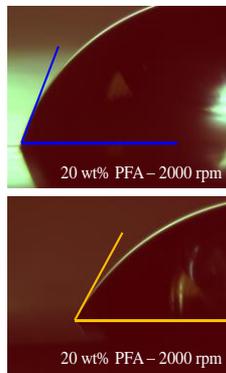

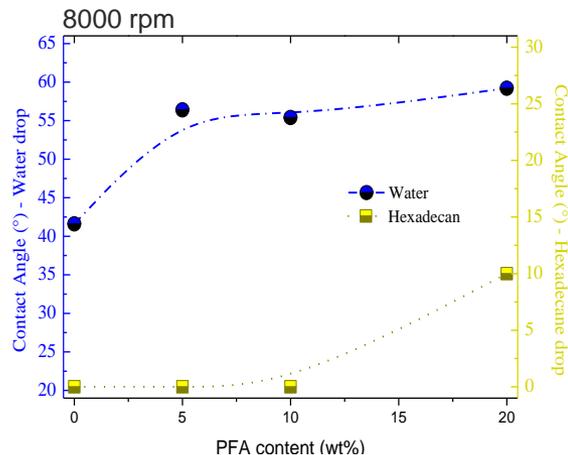

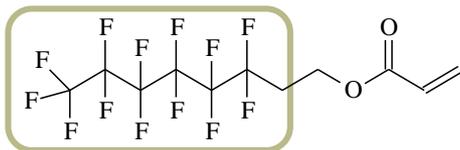

Polymer layer thickness from 1 to 9  $\mu\text{m}$   
Suitable process for both options

## SPECIFIC POLYMERS & PIEZOMAT

Encapsulation polymeric materials in multi-NWs pressure based fingerprint sensors

### Improving surface properties

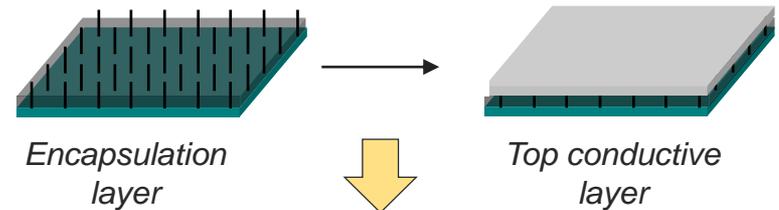

Perfluoro octyl acrylate (PFA)  $\Rightarrow$  hydrophoby / oleophoby

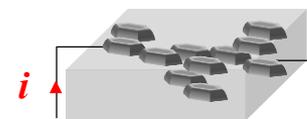

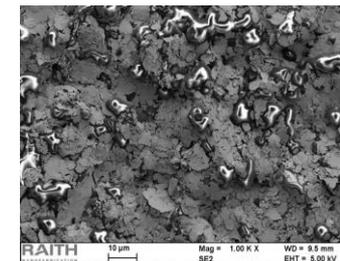

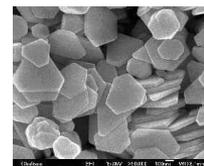

Further improvements of hydrophoby and oleophoby are on going

### Conductive polymer layer as top electrode

Compression option

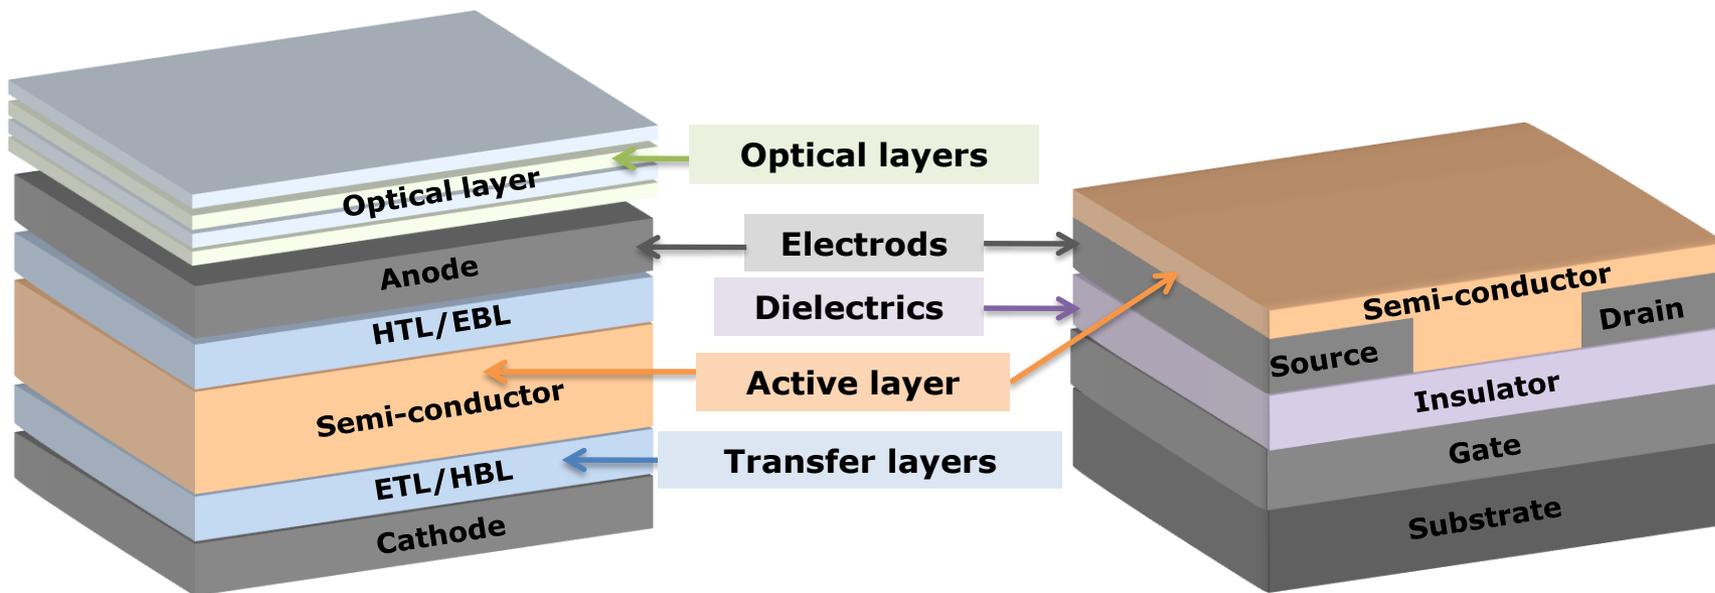

### Polymer - silver flakes hybrid material

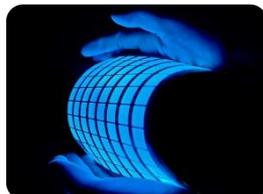

Sheet resistance  
1 and 60  $\Omega$ /sq

## OPTO-ELECTRONIC DEVICES

One polymer for every layers

Organic  
Photovoltaics

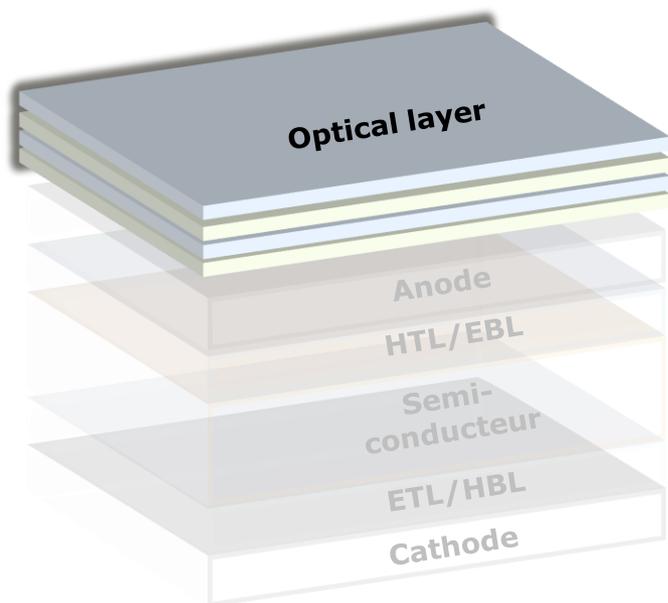

Organic Light  
Emitting Diodes

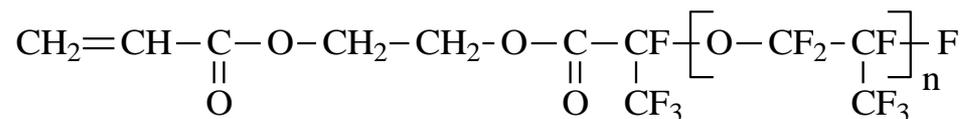

Organic Field-Effect  
Transistor

# OPTO-ELECTRONIC DEVICES

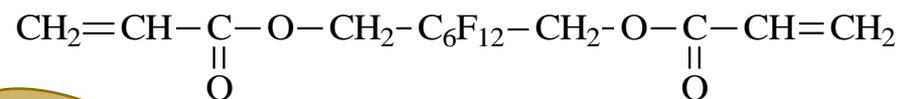

Optical layer : Low refractive index layer

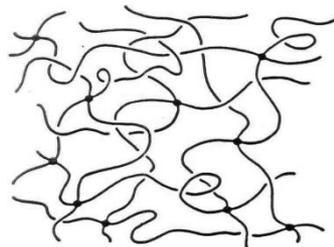

## *Poly(HFPO) acrylate (SP-0P4-7-002)*

## *Fluorinated diacrylate crosslinker*

*UV-Crosslinked  
Low Refractive index material*

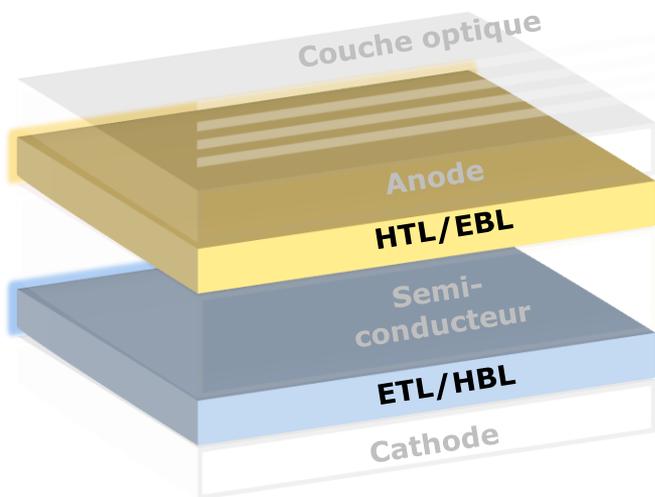

**RI = 1.4**

Hybrid thin layer under study  
(SrTiO<sub>3</sub>, BaTiO<sub>3</sub>, NaF, LiF, CaF<sub>2</sub>)

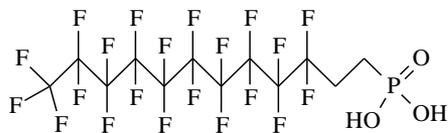

# OPTO-ELECTRONIC DEVICES

e<sup>-</sup>/h<sup>+</sup> transporting and blocking layers

- Hole transporting layers**

Fluorophosphonic acids on PEDOT:PSS layer

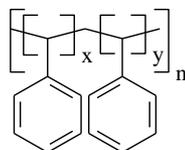

Hole injection

ITO  
Adhesion

⇒ **Better hole transport**

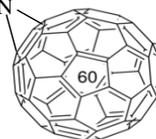

⇒ **Enhanced luminous efficacy**

- Electron transporting layers**

C60 grafted polystyrene

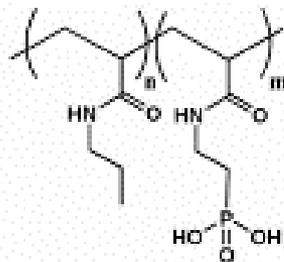

⇒ **Avoid recombination of excitons**

# SP & EUROSENSORS

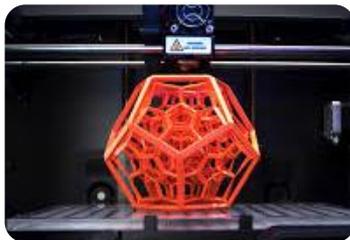

Innovative polymers and materials in the fields of sensors

## Smart Stimuli Responsive Polymers

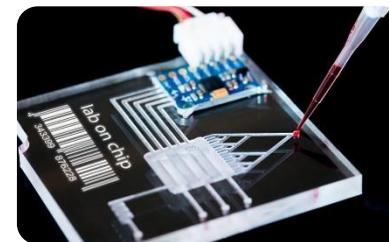

- *Thermal and pH sensitive polymers*

## 3D-printing

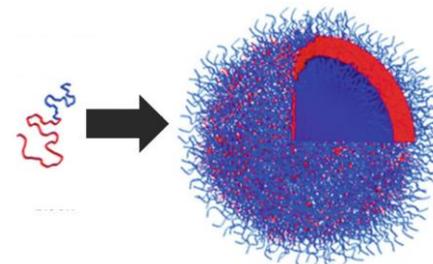

- *Functional materials for 3D printing applications*

## Materials for Microfluidic

- *Sol-Gel materials – Functional alcoxysilane*
- *Functional PDMS, poly(methacrylate), etc.*

- *Amphiphilic block copolymers*

# CONCLUSIONS

## ❑ SPECIFIC POLYMERS

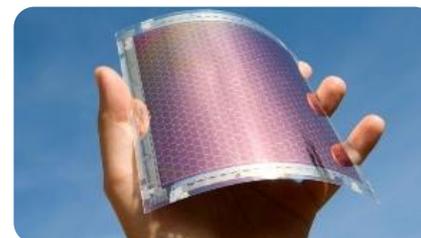

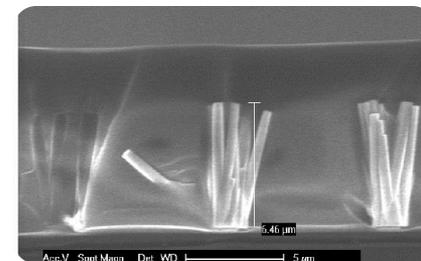

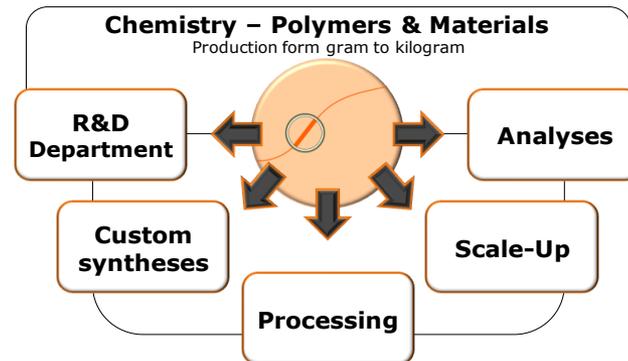

R&D services provider  
Polymers and materials science

## ❑ PiezoMAT European Project

Innovative UV-crosslinked encapsulation  
layers for multi-NWs based sensors

## ❑ Opto-Electronic devices and sensors

SP is involved in optoelectronics  
Looking for collaborations in Sensors

# PiezoMAT

# THANKS
